WAU-609

- Headrest :** Adjustable for height. White outer shell and grey inner shell of molded polypropylene (100% recyclable).
- Backrest :** Adjustable for height and lumbar depth. White outer shell, grey inner shell, lumbar knob and caps of polypropylene (100% recyclable). Back frame in white fiber-reinforced polypropylene (100% recyclable).
- Fabric/Leather surfaces :** upholstered over polyurethane foam (recyclable into carpet padding, wadding etc)
- Mesh surfaces :** 76% elastomer / 24% polyester high tensile mesh.
- Elastomer surfaces :** colored SEBS -type thermoplastic elastomer (TPE) overmolding (100% recyclable with PP into flexible, impact-resistant PP products)
- Armrest :** Adjustable for height and swivel angle. Armpad shells of injection-molded polypropylene (100% recyclable). Armrest upright parts in fiber reinforced polypropylene (100% recyclable).
- Seat :** Adjustable for height. White outer shell and grey inner shell of injection-molded polypropylene (100% recyclable).
- Mechanism :** Adjustable Tilt tension and Tilt Lock control. Main structure and backbone of diecast aluminum alloy 100% recyclable. Covers in grey molded polypropylene (100% recyclable). Levers and knob of molded polyamide (nylon). Internal hardware of steel.
- Base :** Five-prong base of diecast aluminum alloy (100% recyclable) in epoxy powder-coating or polished finish. 60mm dual-wheel castors of molded polyamide (nylon).

PERFORMANCE SPORTS CONCEPT

Think about it. Sports and work share many similarities than first meets the eye. Performance, focus, speed, victories, rewards. Your equipment is crucial to success. Applying the sportsgear concept to office furniture is revolutionary, yet makes perfect sense. After all, both function and interfaces with the human body. Like many cutting edge sports equipment, WAU combines excellent ergonomics to extract human performance and trendy styling to elicit self confidence and satisfaction as you perform. Qualities that are very welcome at work.

UNRESTRICTED SHOULDER MOVEMENT

balanced support for the waist

The upper section is narrower, flatter and flexible to maximize shoulder freedom. This allows and encourages the upper back to twist and stretch as you lean and bend around to reach for the side.

In contrast, the lumbar portion is wider, concave and rotationally rigid to support the lower torso in a laterally upright position and lend support as you bend around. A lumbar profile places the pelvis forward to achieve a proper spine posture.

BUTTON-LESS

adjustments are quick and simple

The backrest, armrest and headrest do not employ buttons or levers. To make adjustments quick and intuitive, just grab the armpad, back shell or headrest, and tilt it to unlock. Slide into desired position and release.

Recline Lock
Seat Height

RECLINE-GLIDE MOTION

matches human joint points and stretches more of your body

The back and seat pivot axis is placed close to the human's hip socket joint (acetabulum), such that there is no relative movement between the backrest and torso, giving a natural and constant fit support through the recline range.

Back pivot of chair
Hip socket joint

The seat moves rearwards, in addition to tilting backwards, to open up thigh calf angle. This allows stretching and strengthening not just at the hips, but at the knees and ankles as well. The resulting movement of additional joints, flexion and contraction of more muscles encourages blood and joint fluid circulation to combat muscular skeletal fatigue arising from inactivity. Movement in more and all parts of the body is healthier.
